

Telespazio Vision: Space Technologies for a New Drones Era

Marco Brancati

Chief Technology & Innovation Officer - Telespazio Group

SUMMARY

- **Telespazio** in a nutshell
- **T-Dromes**: scaling up the use of drones by using space experience
- Medical Goods Delivery: **Bambino Gesù Hospital**
- **S-EDGE**: **Satellite** and **5G** for law **Enforcement** application
- **ICARUS**: **I**ntegrated **C**ommon **A**ltitude **R**eference system for **U-Space**

Telespazio in a Nutshell

- Transnational Industrial Group
- Joint Venture Leonardo (67%) and Thales (33%)
- Leading company in **space based services**:
 - Satellite Communication
 - Geoinformation
 - Satellite Systems and Operations
- Worldwide network of space centers and teleports

Telespazio in UAS Business Domain

In UTM – solutions FOR UAS

- Stakeholder in **d-flight** (with ENAV and Leonardo), Italian UTM/USSP for regulated services

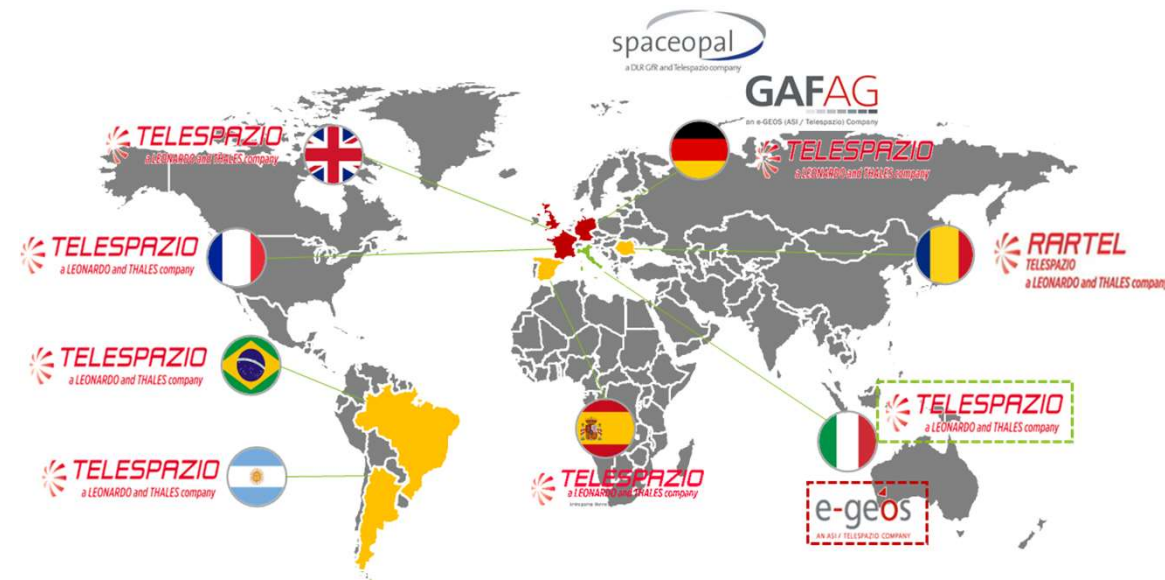

As Global “Drone Service Provider” – solutions WITH UAS

- Developing a proprietary end-to-end solution from mission design up to mission and data exploitation for different RPAS world vertical markets thanks to its platform **T-DROMES**

Certified ANSP

Offering Safety Critical aeronautic services for navigation, communications and surveillance

Telespazio Group International Footprint

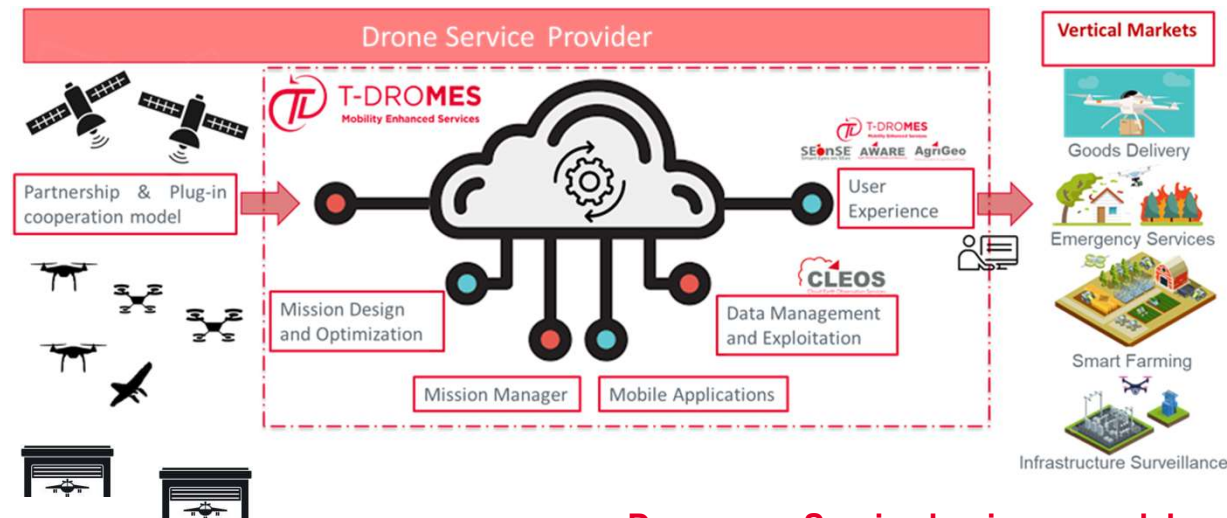

T-DROMES: scaling up the use of drones by using space experience

T-DROMES: Telespazio end-to-end solution for fleet management of RPAS (Remotely Piloted Aerial Systems) to scale up on complex scenarios the operational use of drones for several vertical business cases

T-DROMES designed on the following pillars:

- 1) A **digital platform** supporting federation of drone operators, mission design & authorization, data acquisition and info-product generation.
- 2) A set of **procedures and support services** to manage the overall workflow, starting from user requests up to data exploitation.
- 3) **SW tools** and **HW payloads** to interface custom and commercial drones owned by external drone operators

Drone as a Service business model

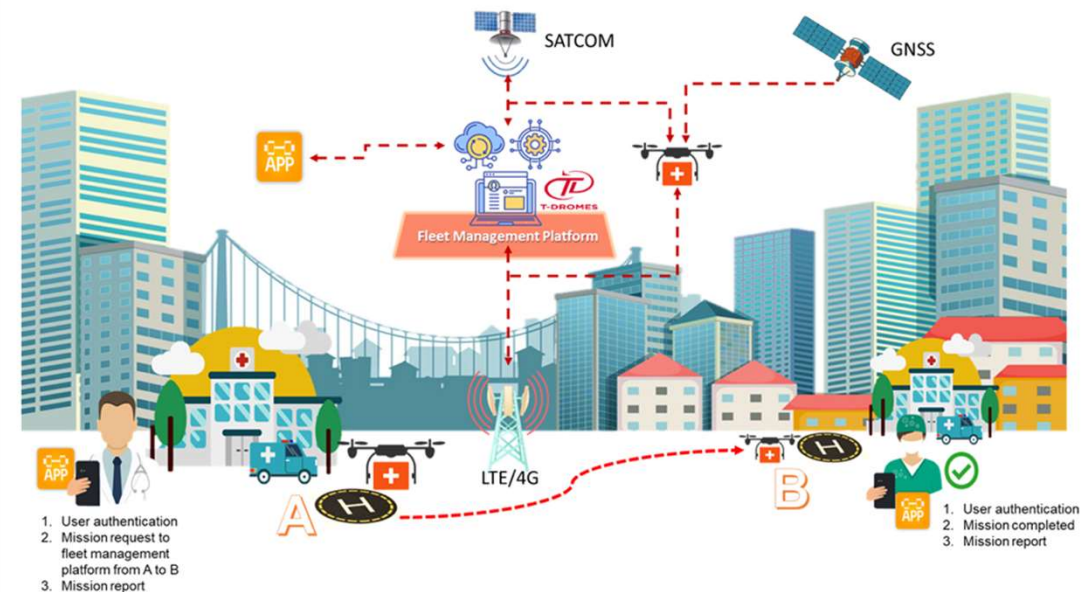

Medical Goods Delivery: Bambino Gesù Hospital

First demonstrations in Italy of **biological samples and biomedical products delivery with drone** between two sites of the Bambino Gesù Pediatric Hospital (OPBG)

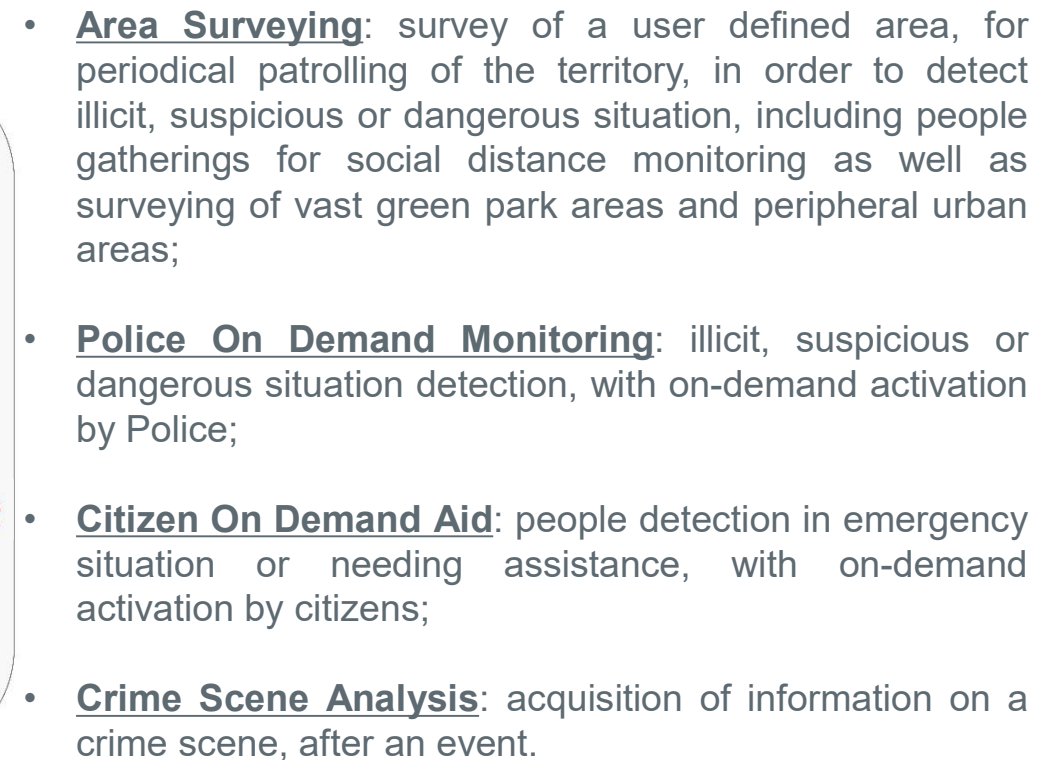

Series of tests / trials dedicated to:

1. **Define and develop operational concepts for biomedical goods delivery** as a precursor of the target service
2. **Evaluate the feasibility of a Drone Delivery service** for biomedical samples delivery between different OPBG premises
3. **Test T-DROMES**, the innovative Telespazio solution exploiting services with drones:
 1. Mission Planning, Command and Control
 2. Precise positioning services
 3. Satellite Channel as a resilient back up
4. **Validate the service and business model** in the Drone delivery sector.

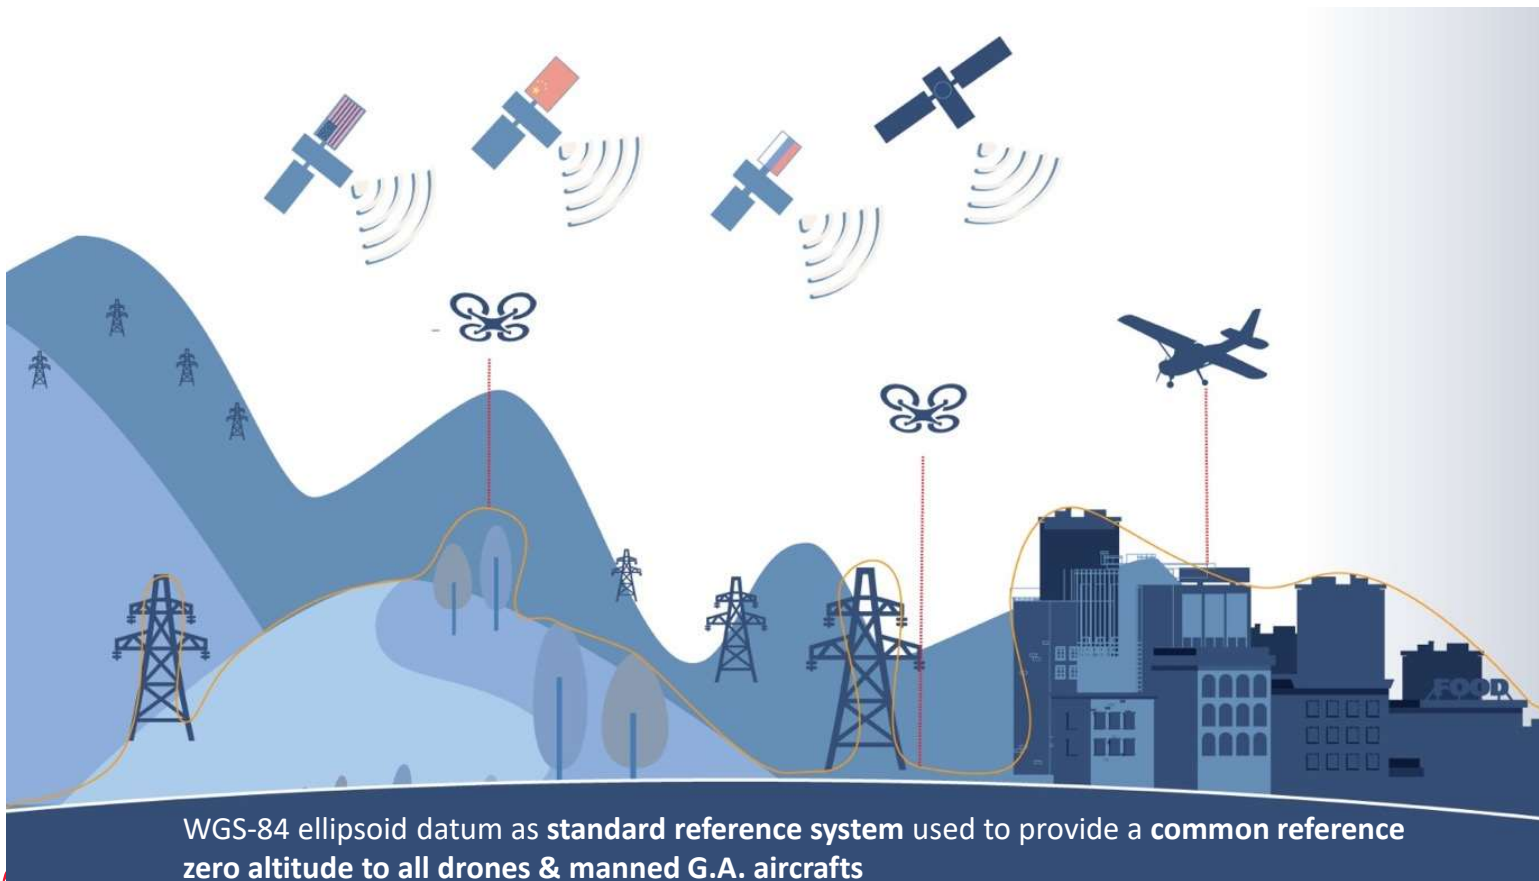

The following **Use Cases** are addressed by S-EDGE:

ICARUS: A Solution To Solve The Common Altitude Reference System

INTEGRATED COMMON ALTITUDE REFERENCE SYSTEM FOR U-SPACE

New U3 U-space solution to:

1. Define a **universal flight altitude reference system** based on a **geometric/geodetic** approach for UAS based on **GNSS**
2. Provide a **UTM functionality** for the strategic and tactical phases giving:
 - **real time information of vertical distance** to ground
 - **conversion of different altitude reference systems** (barometric to geodetic and vice versa)

THANK YOU
FOR YOUR ATTENTION
